

GRANT WESTFIELD

Bringing high impact, low carbon wall panel solutions to Housing 2025

Grant Westfield, creators of Multipanel and Naturepanel, will be showcasing its latest advancements in bathroom wall panels at Housing 2025 (25th and 26th June, Manchester Central). As the UK's leading manufacturer of waterproof panels, Grant Westfield is set to demonstrate how its solutions are transforming interiors across the housing sector – from new-build developments to large-scale refurbishments.

Visitors to the stand can explore the Multipanel and Naturepanel collections, which are rapidly becoming the go-to alternatives to tiles for both residential and commercial bathrooms. With speed of installation, ease of maintenance and on-trend aesthetics, the panels offer a future-forward solution for specifiers, developers and housing associations alike.

Especially well-suited to the social housing sector, Multipanel's wall panels are designed with installation speed and tenant satisfaction in mind. They reduce labour time and allow bathrooms to be fully refurbished in days rather than weeks - minimising tenant disruption and enabling faster turnaround on void properties. The grout-free design makes ongoing cleaning simple, reducing maintenance costs and improving long-term hygiene standards for residents.

A major product update will be unveiled at the show: panels in 2.7 metre heights - ideal for properties with higher ceilings. This new format helps to reduce joints and simplify installation even further, creating a cleaner, more seamless finish.

GRANT WESTFIELD

Also on display will be the brand-new XL Off-set Tile Range, a brand-new sub-category within the current award-winning Tile Collection. Available in four stylish decors - including two new designs, Cremona and Crystal Marble - this innovative range brings a modern, architectural aesthetic to bathroom surfaces while maintaining all the benefits Multipanel is known for.

To support this launch, Grant Westfield will also be debuting a newly updated 44-page specification brochure, featuring the new Off-Set range, Multipanel in 2.7m panel height, and a range of new aluminium profiles in 2.75mm designed to accommodate the new format. This updated resource provides specifiers and contractors with everything they need to bring these innovations into their projects with ease.

With sustainability increasingly at the forefront of the housing agenda, Multipanel and Naturepanel stand out for their significantly lower CO₂ emissions compared to traditional tiles. Manufactured in the UK using FSC®-certified materials and designed for disassembly, the panels support circular design principles without compromising on visual appeal.

From realistic woodgrains to contemporary marbles and tactile textures, the collections offer a design-led yet cost-effective option for social landlords looking to upgrade their housing stock efficiently and responsibly.
